Technical Benefits:

◊ Bonds with substrate
◊ Contains no biocides
◊ Creates hydrophobic surface
◊ Fast drying 30 to 60 minutes
◊ Free of solvents
◊ Full transparent coating
◊ Long durability of 5 to 10 years when not subject to washing regularly
◊ Low application rate 30 - 100 ml/m2
◊ No change of look-and-feel of host-material
◊ Self-cleaning surface activated by UV light and visible light
◊ Suitable for indoor plasters, wallpapers, painted surfaces.

Operational Benefits:

◊ 90m2 treated surface = filter capacity of 8 mature oak trees
◊ Application by ESS or HVLP
◊ Degenerates viruses, bacteria and pollen from the air and from interior surfaces
◊ Digests organic pollution like bird droppings, soot, stains etc.
◊ Easy to touch-up during replacement or repair of surface
◊ Maintains pristine appearance of treated surfaces
◊ Minimizes need for cleaning
◊ Non-hazardous, easy to transport
◊ Prevents organic growth like mold, algae or moss

Operational Benefits:

◊ Low cost per m2
◊ Minimizes cost for cleaning agents and soaps
◊ Minimizes repair and replacement costs due to pollution
◊ Reduces cost for ill personnel
AC 1928  Photocatalytically active coating for air-cleaning and odour neutralisation

Description:

Allcera® AC 1928 Granite and Natural Stone is a very fine, water-based titanium-dioxide dispersion. Its formulation is a photocatalytically active coating and is fully transparent. Upon radiation with light, the coatings will release oxygen radicals from the ambient air and thus decompose solid and gaseous substrates by oxidation (“cold combustion”).

AC 1928 is active under UV light (sunlight) as well as under artificial light up to a wavelength of 475 nm, at a minimum of 150 LUX. It can be used both indoor and outdoor.

Firstly, Allcera® AC 1928 Granite and Natural Stone is designed to protect surfaces against all organic growth. The effect of photocatalysis is supported by a combination of silver ions and zinc pyrithione. AC 1928 is designed for various surfaces of natural stone, EXCEPT for marble.

Allcera® AC 1928 Granite and Natural Stone unites the advantages of photocatalysis with the unique capacity of nano-technology. Instead of sticking mechanically on the surface (like waxes or foils do), the use of nanotechnology ensures that the Allcera® AC 1928 coating bonds into the surface chemically. The active self-cleaning characteristics of titanium-dioxide will not exhaust.

Application:

Allcera® AC 1928 Granite and Natural Stone unites the advantages of photocatalysis with the unique capacity of nano-technology. Instead of sticking mechanically on the surface (like waxes or foils do), the use of nanotechnology ensures that the Allcera® AC 1928 coating bonds into the surface chemically. The active self-cleaning characteristics of titanium-dioxide will not exhaust.
AC 1928  Photocatalytically active coating for air-cleaning and odour neutralisation

- Do not eat, drink or smoke during application.
- Surface must be clean and free from kit, glue, grease, mold or moss.
- Rinse with clean and fresh water to remove soap residues.
- Surface must be dry.
- Ambient temperature during manual application must be at least 18° C.

- Do not apply when ambient humidity exceeds 80%.
- Do not apply in a dusty environment.
- Wear protective gloves during application. Wear safety goggles during application.
- Shake container well for a minute.
- Use ESS or HVLP for application, textiles and smaller items can be bathed.
- Recommended application quantities (non bathing):
  - Plain surfaces 30 ml/m²
  - Textured surfaces 60 ml/m²
  - Absorbent surfaces 100 ml/m²

  - On dark surfaces please apply primer Allcera® AC2223 (15 to 40 ml/m²) first and reduce the above mentioned application quantities for AC 1928 by approx. 25%.
  - Let dry for 30 to 60 mins
  - For BATH application, place a tub, tray or tank on an even and horizontal surface.
  - Put the item in the tub, tray or tank. Make sure the item can be submerged completely in the tub, tray or tank when filled.

  - Fill the tub, tray or tank with Allcera® AC 1928.
  - Make sure item is completely soaked and saturated.
  - In case of bathing make sure item is completely under water.
  - Let item completely dry in ambient air, no forced drying.
  - Item is now ready to use.
  - Put left-over Allcera® AC 1928 in container and use-up within 4 weeks after first opening of original.
  - Allcera® AC 1928 will deteriorate fast when dirty or greasy items are coated without cleaning.

Clean tools, spraynozzles with water immediately after every stop.
Wash hands and face after every stop.

As the technology is about bonding particles into surfaces, matrices of particles need to be built up after application. The treatment reaches full performance AFTER a cure time of approximately 36 to 72 hours, which is dependent upon environmental variables, humidity and heat applied. Tests for performance should be done after full cure. However, the surface can be used and exposed 60 minutes after application.

**Limitations:**

- Do NOT apply on marble.
- Re-apply regularly on paths or walking areas that are in heavy use.
- When installing over poor, greasy or dirty surfaces, the bonding of Allcera® AC 1928 will become erratic, and so will the results be.

- Do NOT freeze product or store in subzero areas.
- Do not allow application during freezing temperatures.
- The self-cleaning effect will not occur in poor visible light, the effective light spectrum is < 475nm for artificial light.

**Logistic:**
AC 1928  Photocatalytically active coating for air-cleaning and odour neutralisation

- Store Allcera® AC 1928 at temperatures between +5° C and +30° C.
- Store Allcera® AC 1928 for max. 6 months in unopened containers counting from production date.
- Storage life for opened containers is 4 weeks, keep containers tightly sealed and store in a dark place.
- Avoid freezing product.
- Allcera® AC 1928 is available in 5L, 25L and 200L containers.
- Never use pressure to empty containers.
- Dispose of contents/container in accordance with local/regional/national/international regulations.
- UN number DOT, IMDG, IATA: 1993
- Shipping name DOT, IMDG, IATA: Ethanol Mixture
- Transport hazard class DOT, IMDG, IATA: 3
- Packaging group DOT, IMDG, IATA: II
- Environmentally hazardous: No
- Marine pollutant: No

Typical properties:

- TiO₂, H₂O, WO₃, SiO₂, Ethanol
- Appearance: yellowish transparent liquid
- Active material: >1,5% by weight
- Effective light spectrum: up to 400 nm
- pH value: approx. 5,5
- Primary particle size: 8 - 20 nm
- Specific Density: 0,91 g/ml
